AUDIENCE INSIGHTS

Beyond the Drone

The Data Behind Autonomous Warfare

WATCH ON DEMAND >

86% said reducing the time from sensor-to-decision time is critical to autonomous operations

Key Takeaway:

Faster decisions remain one of the highest priorities for organizations deploying autonomous capability.

SECURITY MUST KEEP PACE

78% identified security as a significant or critical challenge when fielding autonomous systems

Key Takeaway:

Security cannot become the bottleneck to operational speed.

AUTONOMY IS ALREADY HAPPENING

69% are planning, testing or operationally deploying autonomous capability

Key Takeaway:

The conversation has moved beyond experimentation.

INTEGRATION IS THE PRIORITY

#1 the top priority, connecting autonomy to C2 / mission systems

Key Takeaway:

The challenge is no longer acquiring platforms, it's integrating the mission.

AI NEEDS TRUSTED INFORMATION

The most common operational bottleneck, AI/data processing & validation

Key Takeaway:

Mission success increasingly depends on trusted data reaching AI and decision-makers at mission speed.
